Serial No. 09/745785

Line 9	after "window" insert
Az	in the non-bit inverting operation mode respectively and closes the switching window in
	the bit inverted operation mode;
Line 11	change "380 closes" to
	380b closes or opens, respectively;
Line 13	after "again" insertor remains closed
	respectively;
Line 23	before "Figure" insert
	A filter could be placed between the
A3	modulation section and the delay interference
	section to extract the input-signal, since the
	input-signal is not needed in the delay
	interference section. This filter could be a
	tunable wavelength filter or a special coupler,
	etc
Page 6, Line 20	Before "In Figure" insert
Ay	Figures 5(b) and 5(c) are similar, 5(b) shows
	an apparatus having 2 different length fibers
